PIN<sup>04</sup>

# PIN04 – The ingeniously simple way to weld on ear posts.

The PIN module broadens the range of the PUK® fine welding devices to include a completely new welding function. Using the PIN module, ear studs are welded onto the work piece by means of a unique electronically-controlled lifting action.

The quick and clean way to weld on ear posts made of precious metals, base metals as well as titanium or stainless steel.

The welding process is extremely clean and very mild on the welded material. Ear posts can be welded to even the thinnest of materials, practically without any heat development; even welding areas where the metal is 0.2 mm thick are no problem. Another benefit of this technique is the residual stability of the ear posts, as these are not subjected to soft annealing..

**Just connect it to the PUK04 and operate it via the specially designed setup menu; handling couldn't be easier or more convenient.**

#### Technical Data

Power consumption	50 W
Dimensions (L x W x H)	170 x 110 x 345 mm
Weight	2,54 kg
Item number	100 170
